DESCRIPTION

The Dance of the Siblings - The Dualism of Apollo and Artemis sets formed being against the pre-Socratic apeiron through stark compositional division. The right half concentrates three geometric elements (semi-circle, circle, triangle) that together hold Apollo and Artemis as twin material presence, definite forms emerging in low relief. The left half opens onto the apeiron, Anaximander's unbounded and indeterminate ground from which all definite things arise. The vertical axis stages their relationship: form and its origin, the bounded and the boundless, presence and the source that precedes it.

This prospective work tests polystyrene as a sculptural substrate, layering fabric, plaster, gesso, and acrylic paint to create dimensional surface quality that bridges sculptural and painterly approaches. The multi-layered technique allows the philosophical framework to exist as spatial structure—the viewer encounters division, geometry, emptiness, and presence as formal relationships before (or without) knowing the mythological and philosophical references.

Part of the Myths and Legends series within the Spells and Magic collection, the work translates ancient Greek thought into contemporary geometric language, where void and form enact the relationship between the unbounded ground and the definite shapes it gives rise to.
